Technical Project Manager · Software Engineering & AI/GenAI

Dear Hiring Team,

This role, a technical PM who runs **modern software delivery** (SDLC, Agile, CI/CD, cloud and APIs to production) with engineering, architecture and DevOps, **and** who supports **AI/GenAI initiatives**, maps almost exactly to what I do today. I lead the **engineering team of a GenAI/SaaS platform** with continuous CI/CD, and I built a **multi agent system in production** using **AI assisted development with Claude Code**; under my leadership the company reached **Registered Partner status in Anthropic's partner program**.

The delivery discipline behind that is the same I ran at scale for a decade. At **NTT DATA**, a Tier 1 global consultancy, I led the office's **largest software delivery account** (banking, up to **50 people**; P&L) and directed **CrediCore**, a **digital credit origination hub on Azure** for Banco Popular. I managed the **full SDLC to production**, tracked **cross platform dependencies** and escalated the critical ones to the **bank's presidency from day one** to keep delivery on track, owning the outcome with only **partial control** over the teams involved. I phased the work to deliver **early wins**, and those wins gave the bank the confidence to build a **product roadmap toward mortgage lending**. I am used to reporting **delivery status, risks and blockers to executive leadership** and driving them to resolution.

Two points that fit the preferred criteria directly. First, the AI side is not new to me: I work **hands on with LLMs, AI agents and AI assisted development** (Claude Code, Anthropic), and I enable engineering teams to adopt them in the delivery process. Second, on domain: I ran the **digital transformation of Colombia's Judicial Branch (LegalTech)**, and in banking I delivered a **credit origination hub built on a transversal BPM/BPO** (process and approval workflows). In full transparency, I am based in **Bogotá and available to work remotely across time zones**. What I bring is **technical delivery leadership from SDLC to production, with a current, hands on command of AI/GenAI**. I would welcome the chance to talk.

Best regards,

Roberto Aguirre Guardia
